

Current Crop Quality

Winter wheat harvest is complete. Winter surveys are currently in process. Results should be available soon. Winter wheat for 2012 harvest is 46% seeded and 4% emerged, compared to 30% and 5% from last year.

Spring wheat harvest is approximately 88% complete, behind the five year average. Early HRS samples are showing good quality with average test weights, protein and falling numbers. State Grain Lab is reporting an average test weight of 61.1, moisture of 10.6%, and protein of 13.9% with the very early samples.

The Durum crop is 76% harvested, behind the 5 year average.

Barley harvest is approximately 90% complete. Barley continues to be of good quality. Dryland yields are OK with plump kernels and decent proteins.
